## *"Open-source" Hardware Design*

**14ᵗʰ Feb 2022, Limerick, Ireland.**

The OpenHW Group are taking open-source principles that have revolutionised the software industry and applying them to hardware design in the development of a family of RISC-V based microprocessor cores ("CORE-V"). We're proud to be part of the group and as of now we are involved in the Software Development Toolchain and SDK for CORE-V. OpenHW is part of the Eclipse Foundation community and you can find more details here: https://newsroom.eclipse.org/eclipse-newsletter/2022/january/openhw-group-open-approach-microprocessor-design

Thanks for reading.

Hugh @ Ashling.
